Dramm's Coldfogger Gets an Upgrade

Chris Beytes

If you like your Coldfogger, you'll love the new Coldfogger AR, which features a more durable pump that is easier to use and allows for the use of corrosive chemicals.

The Coldfogger AR uses a piston pump as an upgrade over their previous diaphragm pump. This pump features corrosion resistant components and an easy-to-service design, making the unit more durable for the typical professional greenhouse operations.

The Coldfogger AR operates differently, too. Priming is easy, as the unit uses a self-priming pump that is fed by the agitation pump with a precise pressure and flow. It will be available in a 20-gal. model (80,000 sq. ft. capacity) and a new 50-gal. model (200,000 sq. ft. capacity) with hose lengths up to 300 ft. For more, visit www.dramm.com. **GT**
