### BioSafe Expands Label for ZeroTol Brand

*Jennifer Zurko*

ZeroTol Broad Spectrum Algaecide/Fungicide has a newly updated label in California. This expanded label includes new applications for treatment of hard surfaces and greenhouse tools and equipment to prevent the spread of algal and fungal growth. In addition, ZeroTol is now labeled to treat several new organisms, including Black Spot, Downy and Powdery Mildew, Leaf Spot, Pseudomonas, and Xanthomonas, among others.

With these new updates, the full ZeroTol label is now available to California growers. ZeroTol is an environmentally responsible disease control solution for nursery and greenhouse operations, utilizing peroxygen chemistry to eliminate plant pathogens on contact. Because the peroxygen chemistry breaks down into water and oxygen after reacting,

ZeroTol has a zero-hour REI and no run-off concerns. ZeroTol is effective against a wide array of pathogens and can be used to treat plants, water and equipment to prevent the spread of disease.

ZeroTol is available in 2.5, 30, 55, and 275 gal. sizes. For more information about ZeroTol, contact BioSafe Systems at 1-888-273-3088. **GT**
