### New Pot Alstroemeria Now Available From D.S. Cole

*Jennifer Zurko*

D.S. Cole Growers now offers the Inca Collection of pot alstroemeria from Könst Alstroemeria of The Netherlands. These alstroemeria are bred specifically for pot production, can flower all summer in the garden, and are winter hardy to 20F (-6C). They are produced true-to-type from tissue culture. Alstroemeria can be grown in houses as cool as 50F (10C) or in warmer temperatures typical of most spring crops. Providing high-light intensity is most important. Only one plant is needed to fill out an 8-in. pot.

D.S. Cole offers the Inca varieties in traditional 50-count trays in five straight colors. They're also available as mixed trays as a great way to trial the product. These are available through all of D.S. Cole Growers' brokers for immediate shipping. **GT**
