## New Sanitizer/Disinfectant for Greenhouse Cleaning

Jennifer Zurko

BioSafe Systems has spent the last 15 years providing food safety solutions, from growing to packing, with products like SaniDate 5.0 Disinfectant/Sanitizer.

New to the greenhouse industry, SaniDate 5.0 keeps food contact and non-food contact surfaces free from human health pathogens, as well as plant pathogens. Effective against *Escherichia coli*, *Staphylococcus aureus*, *Listera*, *Klebsiella pneumoniae*, and other bacteria and molds, SaniDate 5.0 is a peroxycompound chemistry that works quickly to remove pathogens and their spores from food and non-food contact surfaces and equipment.

SaniDate 5.0 leaves no harmful residues and no rinse is required, therefore, costs for labor are lowered. This chlorine alternative also has no disinfection byproducts. SaniDate 5.0 Disinfectants/Sanitizer is an EPA-registered, OMRI Listed for organic production and CRC Kosher Certified.

“It only makes sense to bring our food safety expertise to the greenhouse industry. SaniDate 5.0 helps meet the ongoing requirements of HACCP, FSMA and other food safety standards. Not only will it become a major product for those growing edibles, but its superior formulation and manufacturing standards will help general greenhouse sanitation,” said BioSafe Systems Ornamental Sales Manager Jeff Kline.

For more information about SaniDate 5.0, call BioSafe Systems at (888) 273-3088 or visit [www.biosafesystems.com](http://www.biosafesystems.com). **GT**
