Front Range Biosciences and Griffin Partner to Distribute Hemp

Jennifer Zurko

Front Range Biosciences (FRB)—a technology provider for the breeding and production of new plant varieties and seeds in hemp, coffee and regulated cannabis industries—and Griffin Greenhouse Supplies, Inc. announced a sales and distribution partnership for hemp plants and hemp seeds. The announcement expands the reach of FRB's Clean Stock program, providing a premium selection of rooted cuttings, seedlings and seeds. With a nationwide sales force, Griffin has the capacity to distribute FRB's hemp plants and hemp seeds throughout the burgeoning hemp industry.

"Growers across America know and trust Griffin to deliver uncompromised quality and deep horticultural knowledge," said Dr. Jonathan Vaught, co-founder and CEO of Front Range Biosciences. "As an authorized distributor of our Clean Stock hemp varieties, growers nationwide will now have access to the most robust and reliable premium hemp plants available."

"FRB continues to push the boundaries of science for the betterment of agriculture," said Tami Van Gaal, CEA Division Leader for Griffin. "As interest in hemp cultivation continues to expand exponentially, the FRB portfolio delivers performance and quality assurance unmatched in the industry."
