AdeptAg adds Danish moving gutters

Chris Beytes

[AdeptAg](#), one of North America's leading horticultural solutions provider, has announced a strategic partnership with [FGM](#), a Danish innovator known for its Moving Gutter Systems (MGS). FGM's Moving Gutter System has gained international acclaim among growers for its capacity to optimize space and enhance plant growth. Designed for crops such as lettuce, herbs, vegetables and other leafy greens, MGS offers improved efficiency and sustainability.

AdeptAg will serve as the exclusive North American distributor for FGM's grow systems and various FGM-manufactured horticultural equipment, enabling growers across the continent to access this cutting-edge, labor-saving technology. AdeptAg's family of companies—Agrinomix, Zwart Irrigation and Plantech Controls—will contribute to these projects.

David Stienes, AdeptAg's CEO, said, "North American leafy green, vegetable and herb producers face the challenge of finding reliable growing systems that keep them competitive in the market for years to come. We know our partnership with FGM's Moving Gutter Systems will enable us to provide the most comprehensive solution on the market, along with the ability to maintain and service that technology throughout its lifecycle—a service that no other provider can truly match today."

Jeff Warschauer, FGM's Director of Business Development and Key Account Sales, echoed this sentiment, adding, "A more formal cooperation was the logical next step after many successful years of collaboration with AdeptAg on various projects in North America. We know this partnership will provide growers with the best of both worlds—advanced technologies and exceptional North American service."
