New Insecticide Posters

JC Chong

In 2022, I developed a poster that listed most insecticides registered for use on ornamental plants in greenhouses and nurseries. I didn't list all of the insecticide trade names or pre-mixed insecticides, but I'm confident that I'd listed all the active ingredients and trade name examples that are available to ornamental plant growers.

I've updated the Ornamental Insecticide Poster this year to include new products or uses that were introduced just in the past couple of years. The updated Ornamental Insecticide Poster has the list of insecticides—their IRAC numbers, active ingredients, selected trade names, use sites, REI and registered target pests—on one side. I've provided a few examples of rotation programs on the other side of the poster. This year, I developed a new insecticide poster for greenhouse-grown vegetable crops, a growing segment of controlled environment agriculture (CEA).

Go to sepro.com/bugposter to download the Ornamental Insecticide Poster and the CEA Insecticide Poster or to request printed copies to be mailed to you. **GT**
