### ZeroTol 2.0 Now Labeled for Edibles

*Jennifer Zurko*

ZeroTol 2.0 has been a major player in the greenhouse industry for more than 15 years and now, with many growers following the trend of growing edibles, BioSafe Systems found it necessary for ZeroTol 2.0 to be labeled for foliar applications on fruits and vegetables grown in greenhouses.

The amendment to the ZeroTol 2.0 label includes foliar, soil drench, irrigation or fog applications on greenhouse vegetables and fruits. ZeroTol 2.0 can be used on many different food crops and can be applied the same day as harvest to control pathogens like botrytis, powdery mildew, alternaria, bacterial blights and wilts, and many more.

For more information about using ZeroTol 2.0 on greenhouse edibles, contact BioSafe Systems at (888) 273-3088 or visit [www.biosafesystems.com](http://www.biosafesystems.com). **GT**
