OHP gets OMRI listing for Pycana Insecticide/Miticide

Chris Beytes

If you're an organic grower looking for a new insecticide and/or miticide, OHP has you covered with Pycana, a unique combination featuring a blend of natural pyrethrins and canola oil. It offers quick knockdown of many common insects and mites, including aphids, thrips, whiteflies, spider mites, leafhoppers, earwigs, plant bugs, psyllids and mealybugs.

Pycana is labeled for use on ornamentals, fruits, vegetables and herbs grown in greenhouses, shadehouses and container nurseries. And now it's OMRI-listed, meaning you can apply it in certified organic settings. Learn more at ohp.com. **GT**
