FRAC Code Posters Available

Bill Calkins

You're familiar with Dr. Ann Chase, one of our industry's most trusted educators and diagnosticians, and a leading consultant of Chase Agricultural Consulting to successful greenhouse professionals across North America. Ann is always on the cutting edge and has a clear understanding of the challenges you face running a successful business and managing day-to-day issues in your greenhouse.

Ann and her husband, Mike, have a new FRAC Links poster they've put together to help you visually identify the fungicides you need to create an effective rotation program by including and avoiding certain product codes. These are available now and will certainly be a useful tool to have for your production teams moving into the season in 2022. They're just \$10, so order enough to post one in every key area in your greenhouse. You can order at chaseagri.com/frac-links-poster-order.

As a reminder, the Fungicide Resistance Action Committee (FRAC) put together the list of FRAC codes to help categorize fungicide products based on their mode of action (MOA) and site of action (SOA). Understanding and being aware of these codes is critical for developing successful chemical rotations. **GT**
